

XOPHER "XP" POLLARD

PRINCIPAL SYSTEMS ARCHITECT & SYSTEMS SYNTHESIST

Tucson, AZ | 520-762-4947 | hello@xophz.com | linkedin.com/in/xophz | github.com/xopherdeep | xophz.com

EXECUTIVE PROFILE

A results-driven Principal Systems Architect and Practice Lead with over 25 years of experience designing, modernizing, and orchestrating mission-critical distributed infrastructure. Proven track record deploying automated, multi-tenant cloud and edge networks supporting 25+ production platforms processing 160,000+ aggregate monthly requests with 99.99% availability. Deep technical authority across Kubernetes, Infrastructure as Code (Terraform), event-driven streaming pipelines, sovereign protocol design (w4 Protocol), and modern browser-based spatial rendering engines (WebGPU). Adept at leading cross-functional engineering teams, eliminating technical debt, and translating ambiguous business and scientific requirements into durable, self-healing platforms.

CORE ARCHITECTURE & ENGINEERING COMPETENCIES

Cloud-Native & Distributed Systems: Kubernetes, Docker, AWS (20+ services), GCP, Terraform (IaC), Microservices, Multi-Tenancy, Zero-Trust Networking, Edge Caching, Sovereign Protocols (w4).
High-Throughput Data & Observability: Event-Driven Pipelines, Asynchronous Queuing, Telemetry Streaming, REST/GraphQL APIs, Prometheus, OpenTelemetry, SRE Runbooks, Distributed Caching.
Full-Stack, Graphics & Spatial Computing: TypeScript, Node.js, Python, C#, WebGPU/WebGL Shaders, Vue.js/Nuxt, React, Linux Internals, Distributed State Orchestration.
Agentic Systems & Architecture: Disciplined Atomic Design (Atoms/Molecules/Organisms), Context-Isolated AI Agent Workflows, Prompt Architecture, Automated Self-Healing Runtimes.

FLAGSHIP APPLICATIONS & SOVEREIGN PLATFORMS DEVELOPED

YouMeOS (Spatial Web Operating System): Architected browser-based spatial OS using Vue 3 and WebGPU rendering pipelines (HeliOS, NexOS, NoOSphere) for dense volumetric 3D information spaces with native frame stability.
COMPASS Engine & Sparks Platform: Designed bespoke personal application platform and unified tool ecosystem (CRM, quest logs, analytics) built on rigid Atomic Design with zero-latency local execution.
BlackBOX & w4 Protocol: Engineered proprietary sovereign infrastructure nodes with automated self-healing runtimes, multi-tenant container orchestration, and w4 Hyper-cube distributed protocol.
MRO Planner Wizard: Built enterprise digital planning tool and automated onboarding ecosystems providing structural clarity and validation to mission-critical daily workflows.
Do It For The XP & GlowitheFlow: Created gamified productivity progression engines and creator mutual promotion networks featuring decentralized engagement mechanics and flow economics.

PROFESSIONAL EXPERIENCE

Managing Practice Lead & Principal Architect <i>Hall of the Gods, Inc. / My Compass Consulting (Tucson, AZ)</i>	12/2004 - Present
Federated Network Operations: Architected, deployed, and manage multi-tenant edge infrastructure spanning 25+ active production web platforms, routing 160,000+ monthly requests with automated edge caching and 99.99% uptime. Sovereign Systems & Platform Engineering: Designed and delivered scalable, containerized client platforms and workflow engines (including BlackBOX self-healing nodes), reducing ongoing maintenance overhead by 80%. B2B Systems Advisory: Directed technical infrastructure engagements for commercial clients, conducting full-stack architecture audits, eliminating DNS and data bottlenecks, and migrating on-prem setups into secure cloud environments. Next-Gen Spatial Computing: Engineered browser-based spatial OS prototypes (YouMeOS), stress-testing WebGPU rendering pipelines and complex state coordination for dense volumetric information spaces.	
Principal Systems Architect & Cloud Modernization Lead <i>Vi (Remote)</i>	12/2021 - 01/2026
Cloud Modernization: Spearheaded enterprise transition from monolithic legacy systems to containerized cloud-native platforms on AWS and Kubernetes, sustaining continuous 99.99% availability without operational disruption. Observability & Reliability: Built automated SRE monitoring frameworks and APM telemetry pipelines, cutting incident mean-time-to-resolution (MTTR) by 45% and establishing strict on-call operational runbooks. DevSecOps Standard: Implemented multi-repository CI/CD automation and modular Terraform IaC frameworks, accelerating feature delivery velocity while enforcing rigid compliance and security boundaries.	
Senior Software Architect (Data-Intensive Systems) <i>J.D. Mellberg Financial / Tracking First</i>	08/2015 - 10/2019
High-Throughput Ingestion: Architected enterprise telemetry pipelines and distributed document databases, parsing and validating millions of transaction records in real time with near-zero latency and strict auditability. Operational Cost Reduction: Engineered dynamic analytics transparency layers and automated data validation services, eliminating processing redundancies and saving an estimated \$1.2M in annual operational waste.	

APPLIED ACADEMIC EQUIVALENCY & VERIFICATION

25+ years of self-directed technical mastery, production systems architecture, and distributed platform design meeting and exceeding formal academic requirements for an advanced degree in Computer Science. Consulting and corporate records verifiable via IRS filings, state corporate registries, and client delivery attestations.
